*ICC Ratio > 0.5 (highlighted green) = feature varies MORE between subjects than within.
These features are most stable per-person and differ most person-to-person.*

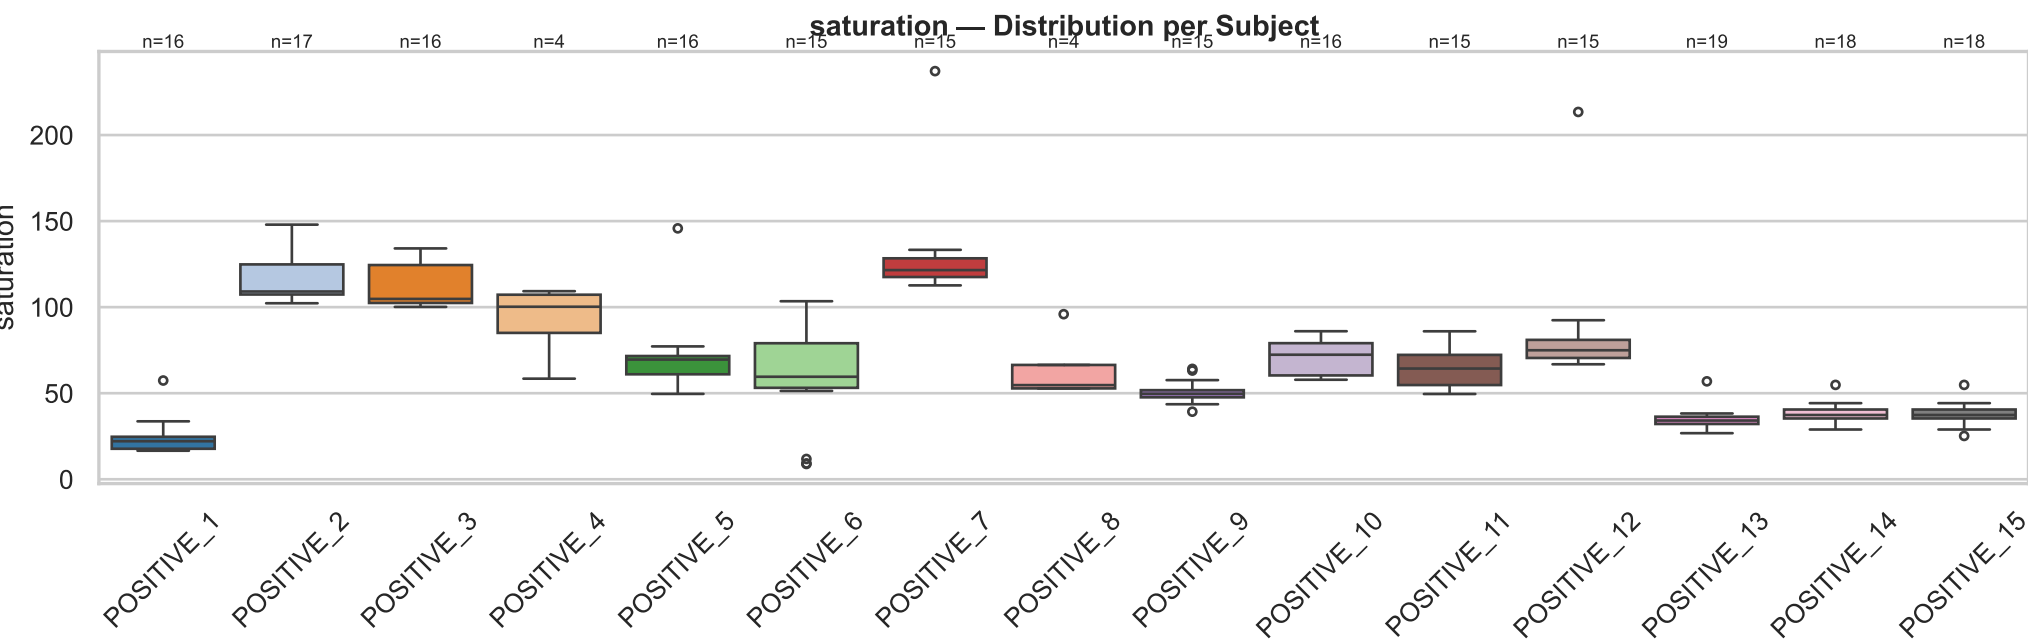

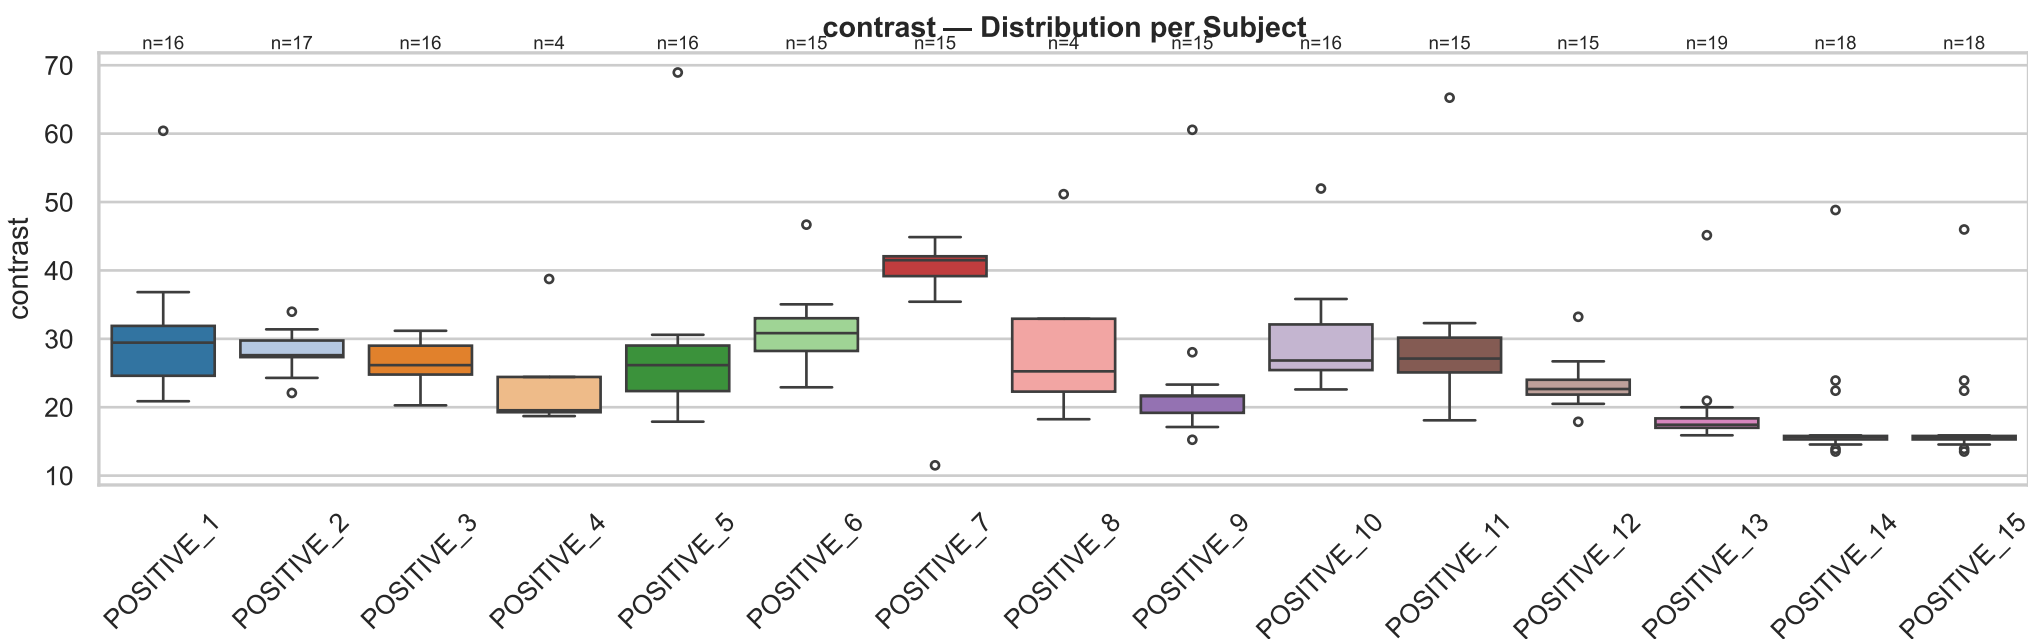

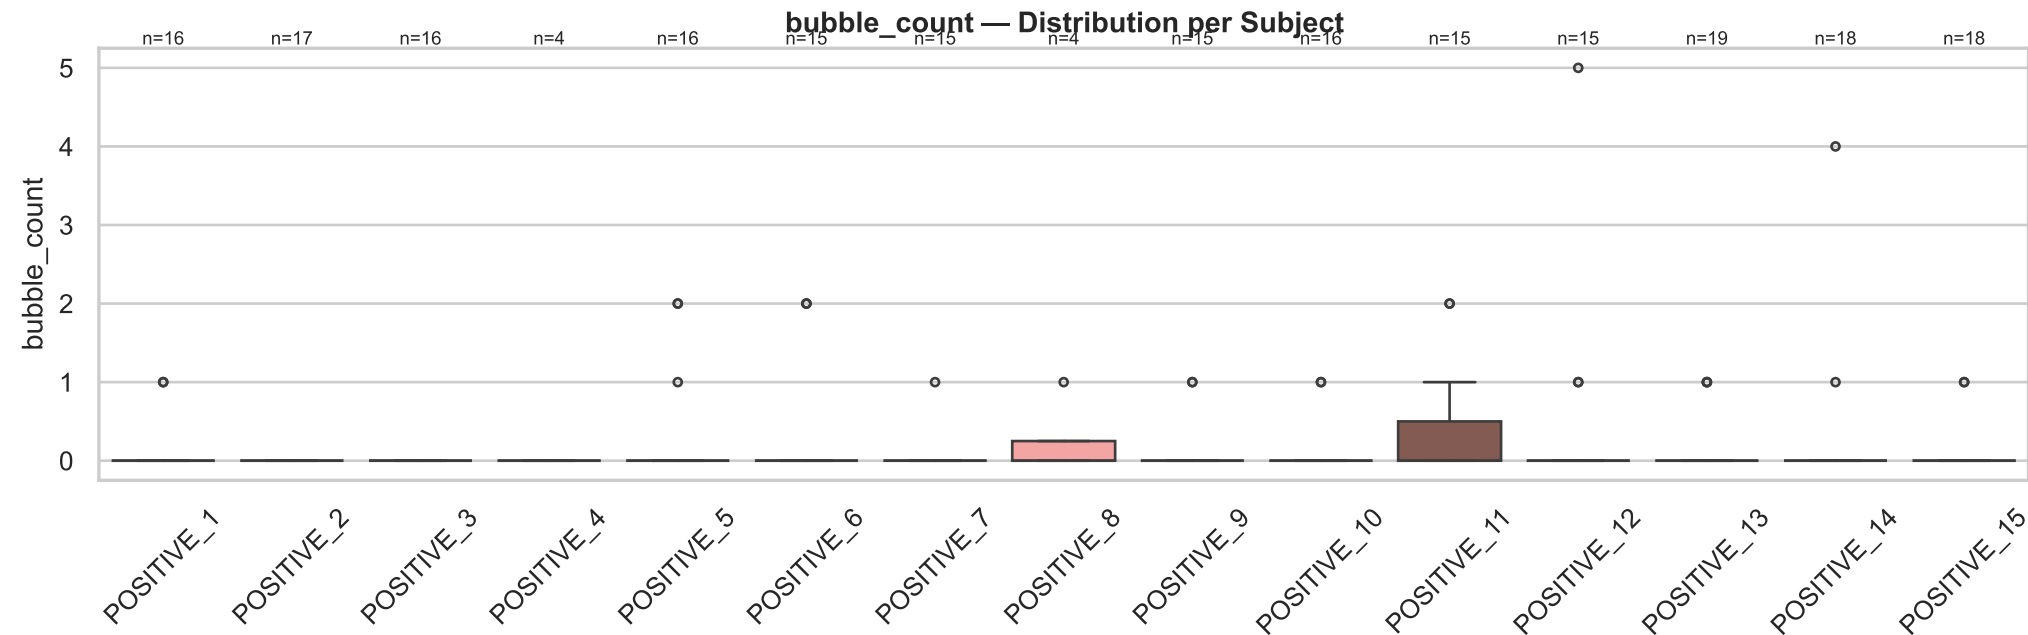

Feature Stability: Between-Subject vs Within-Subject Variance

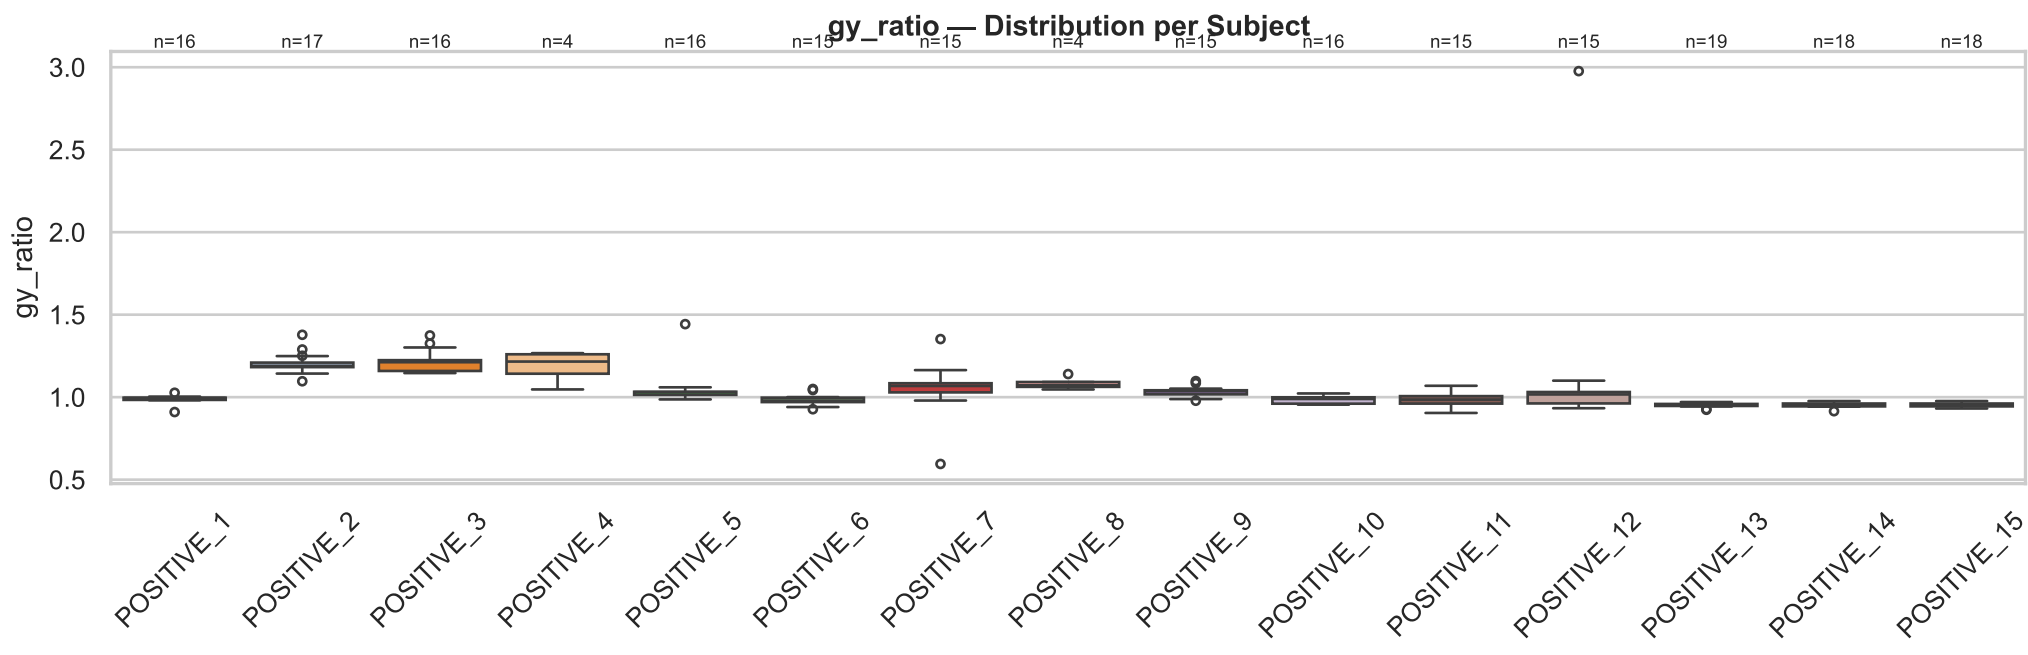

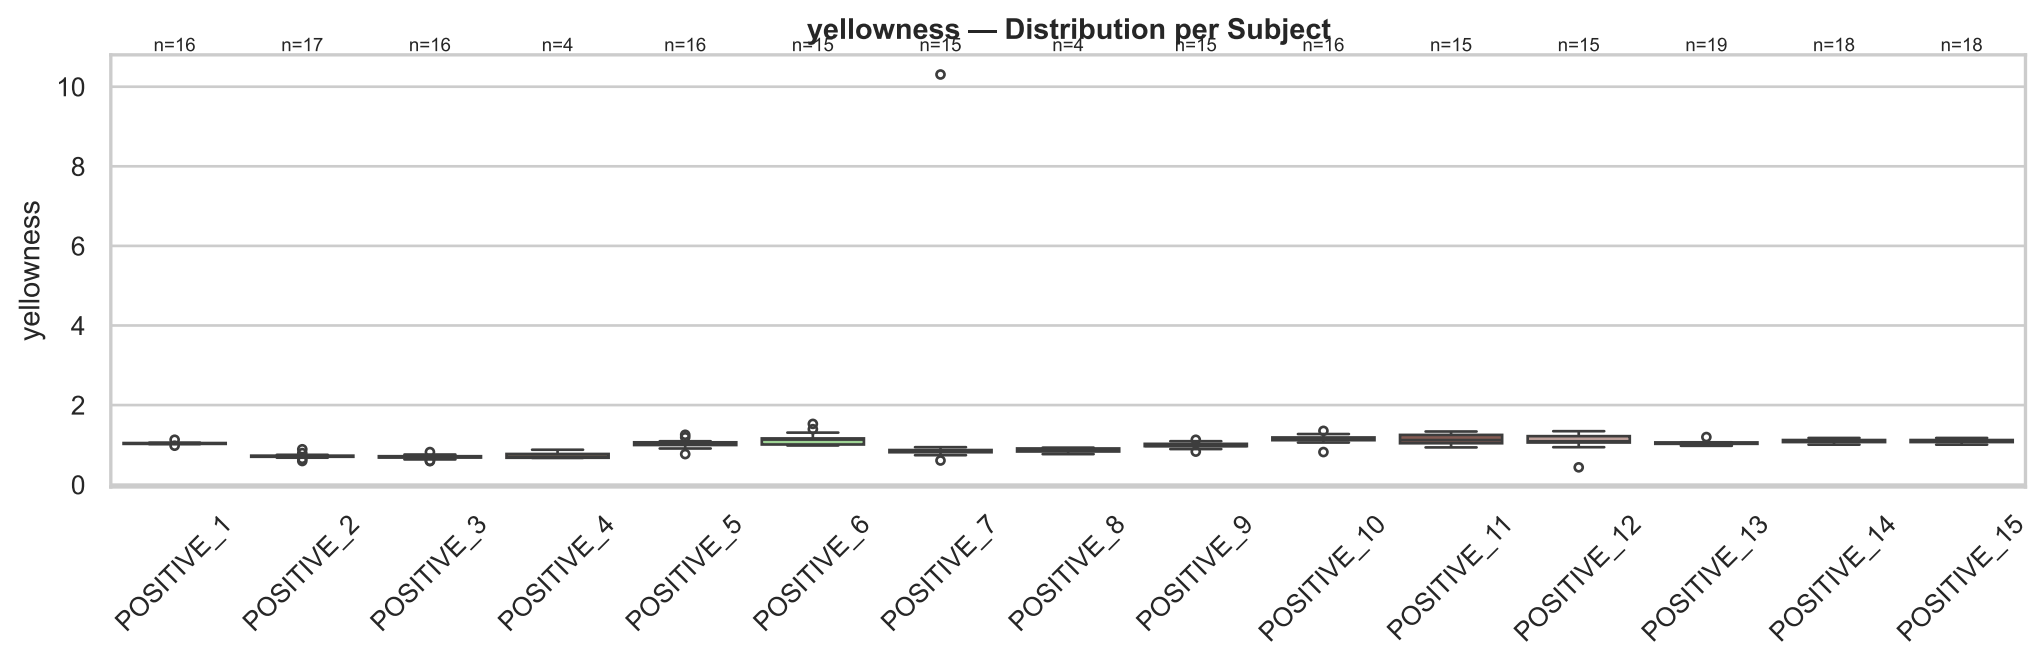

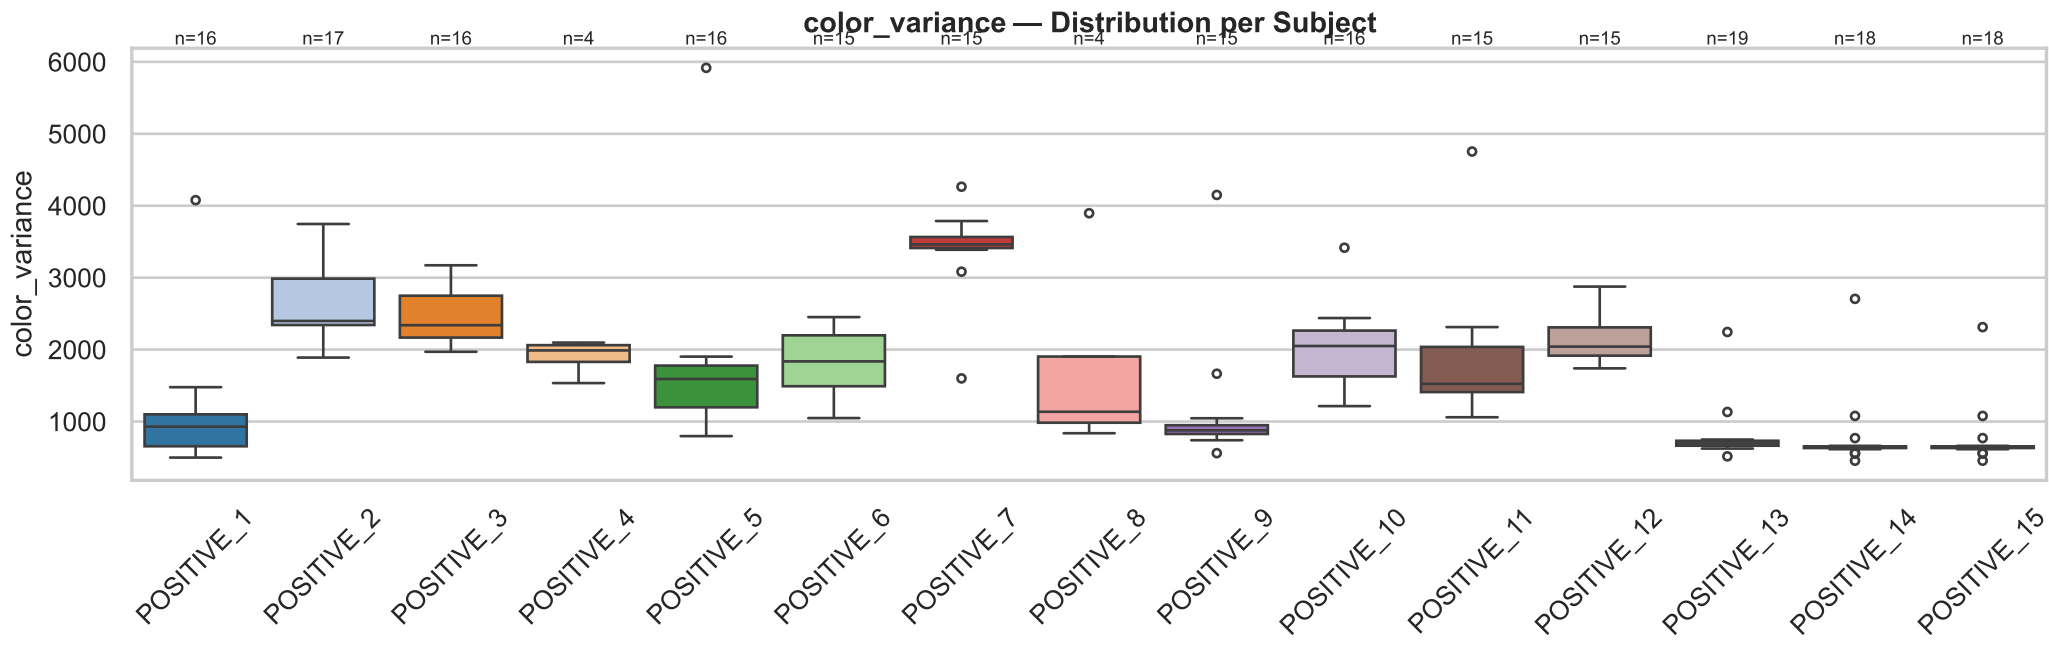

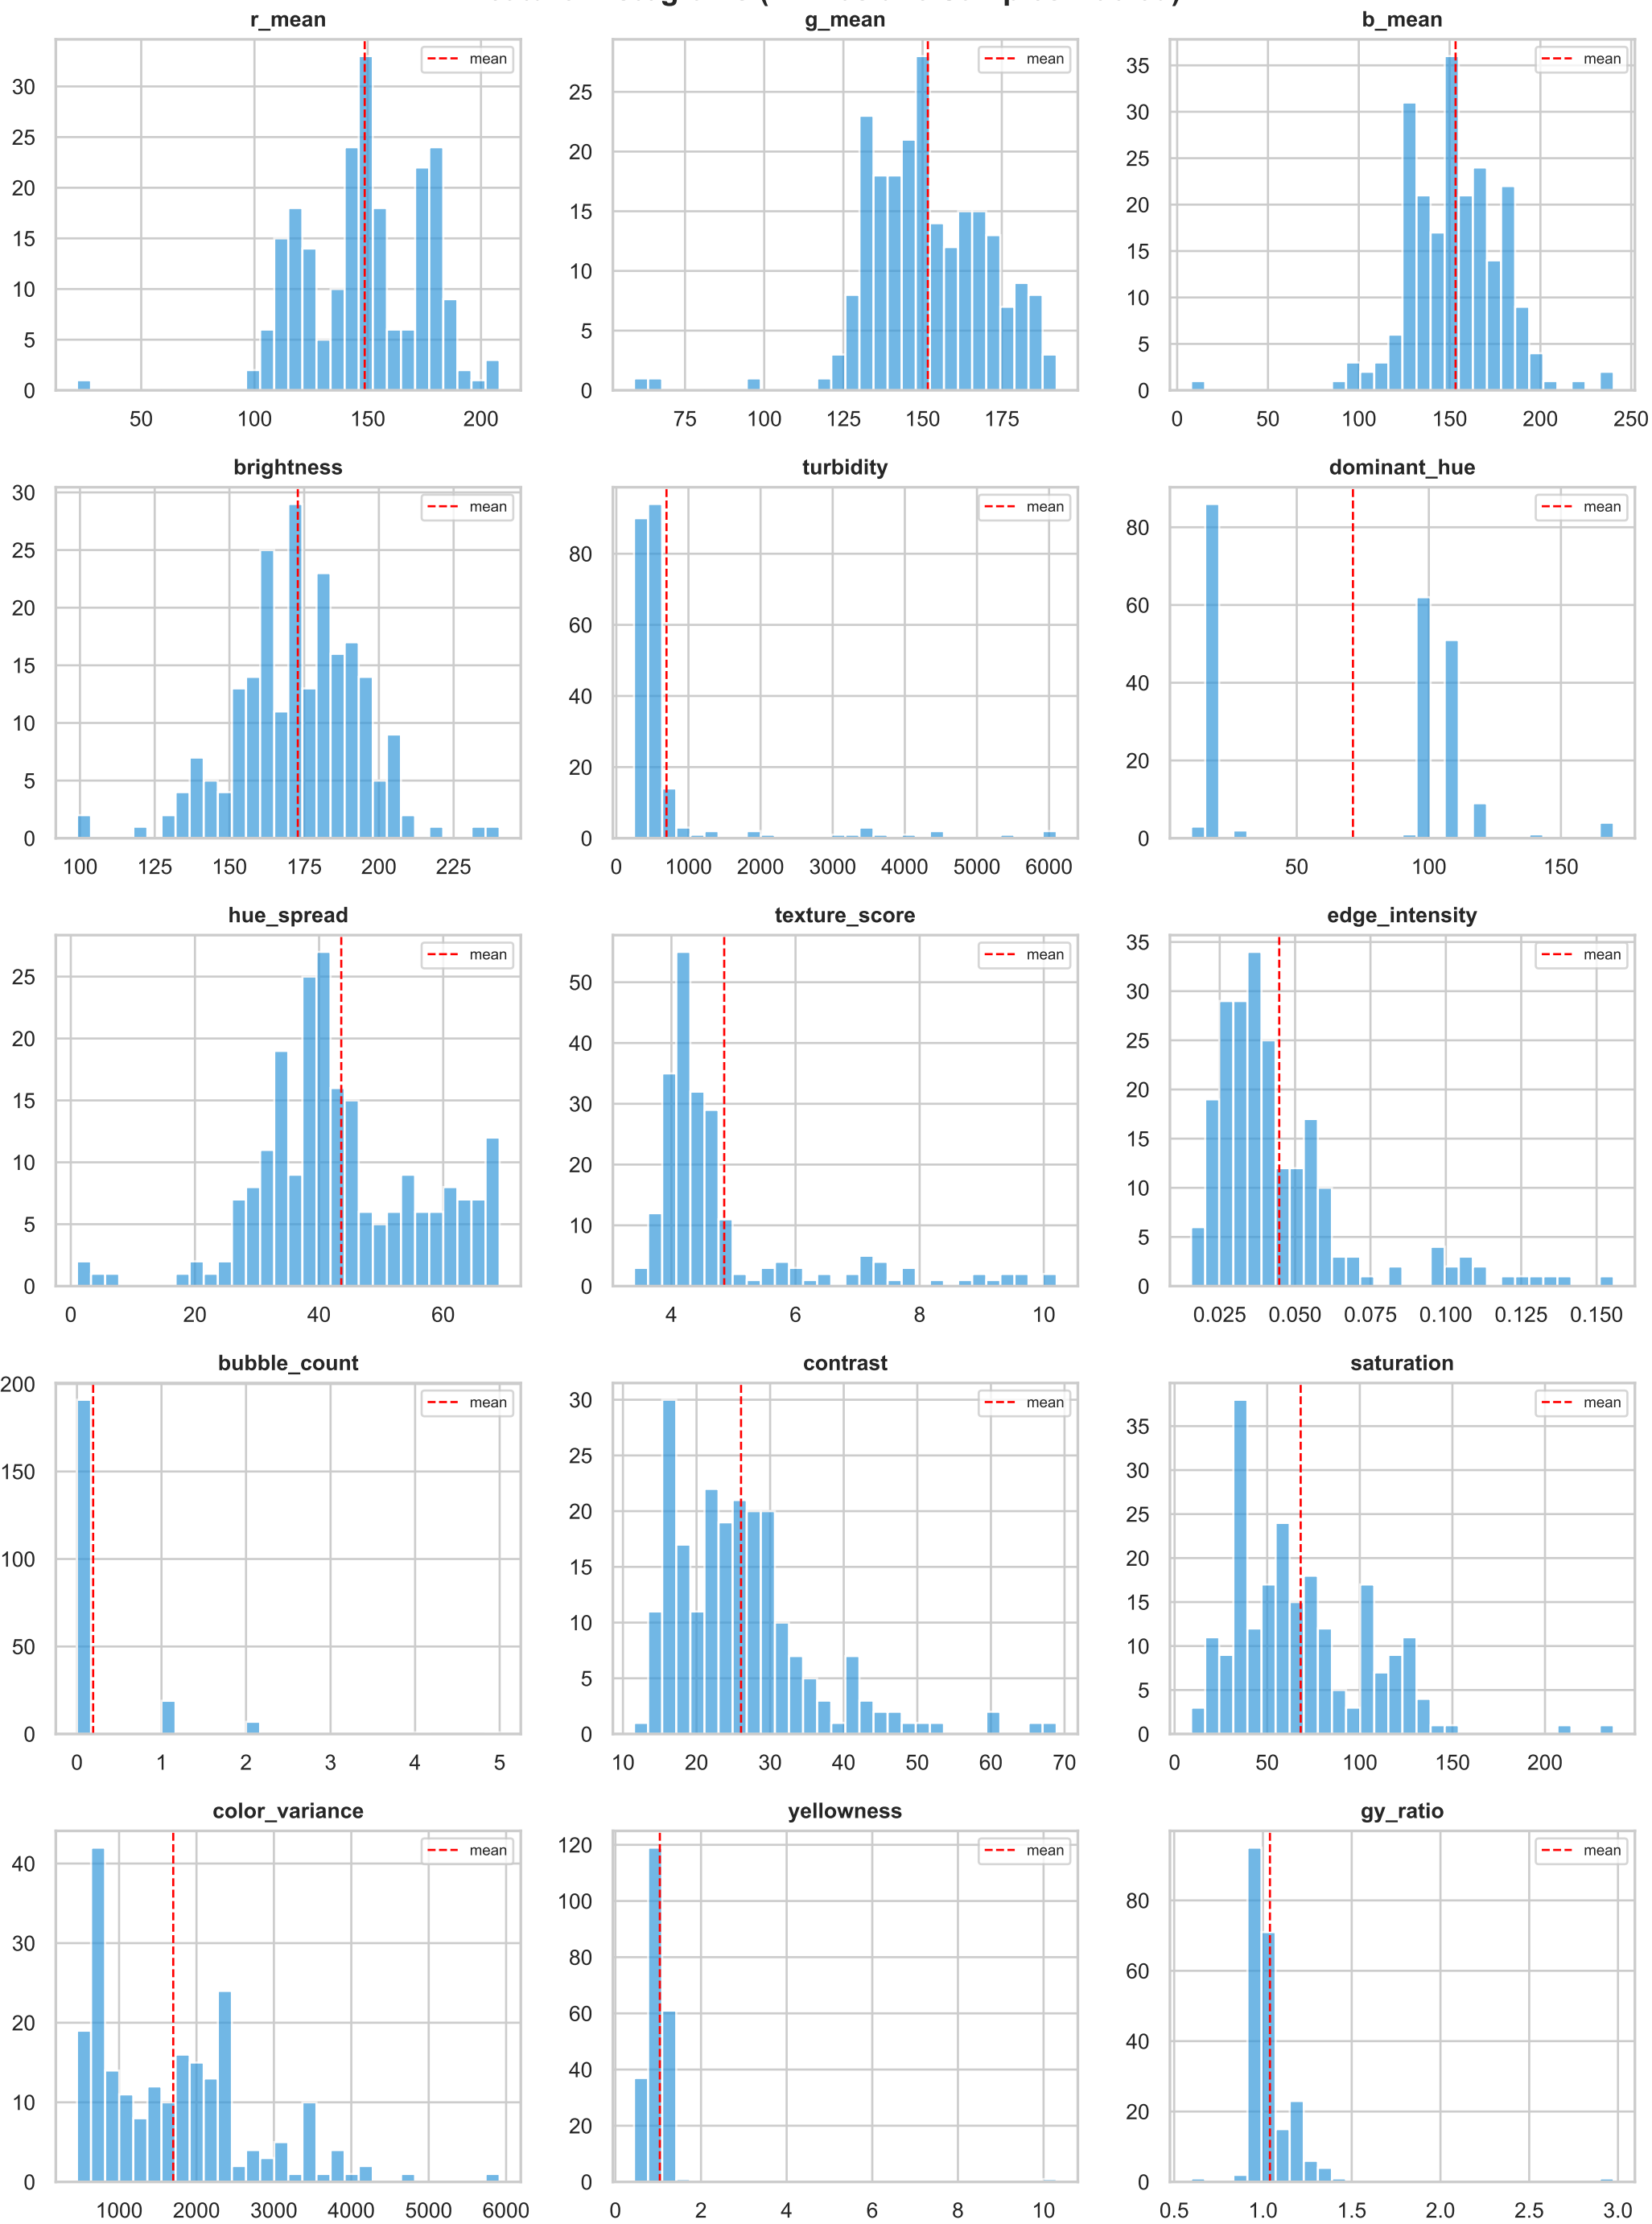

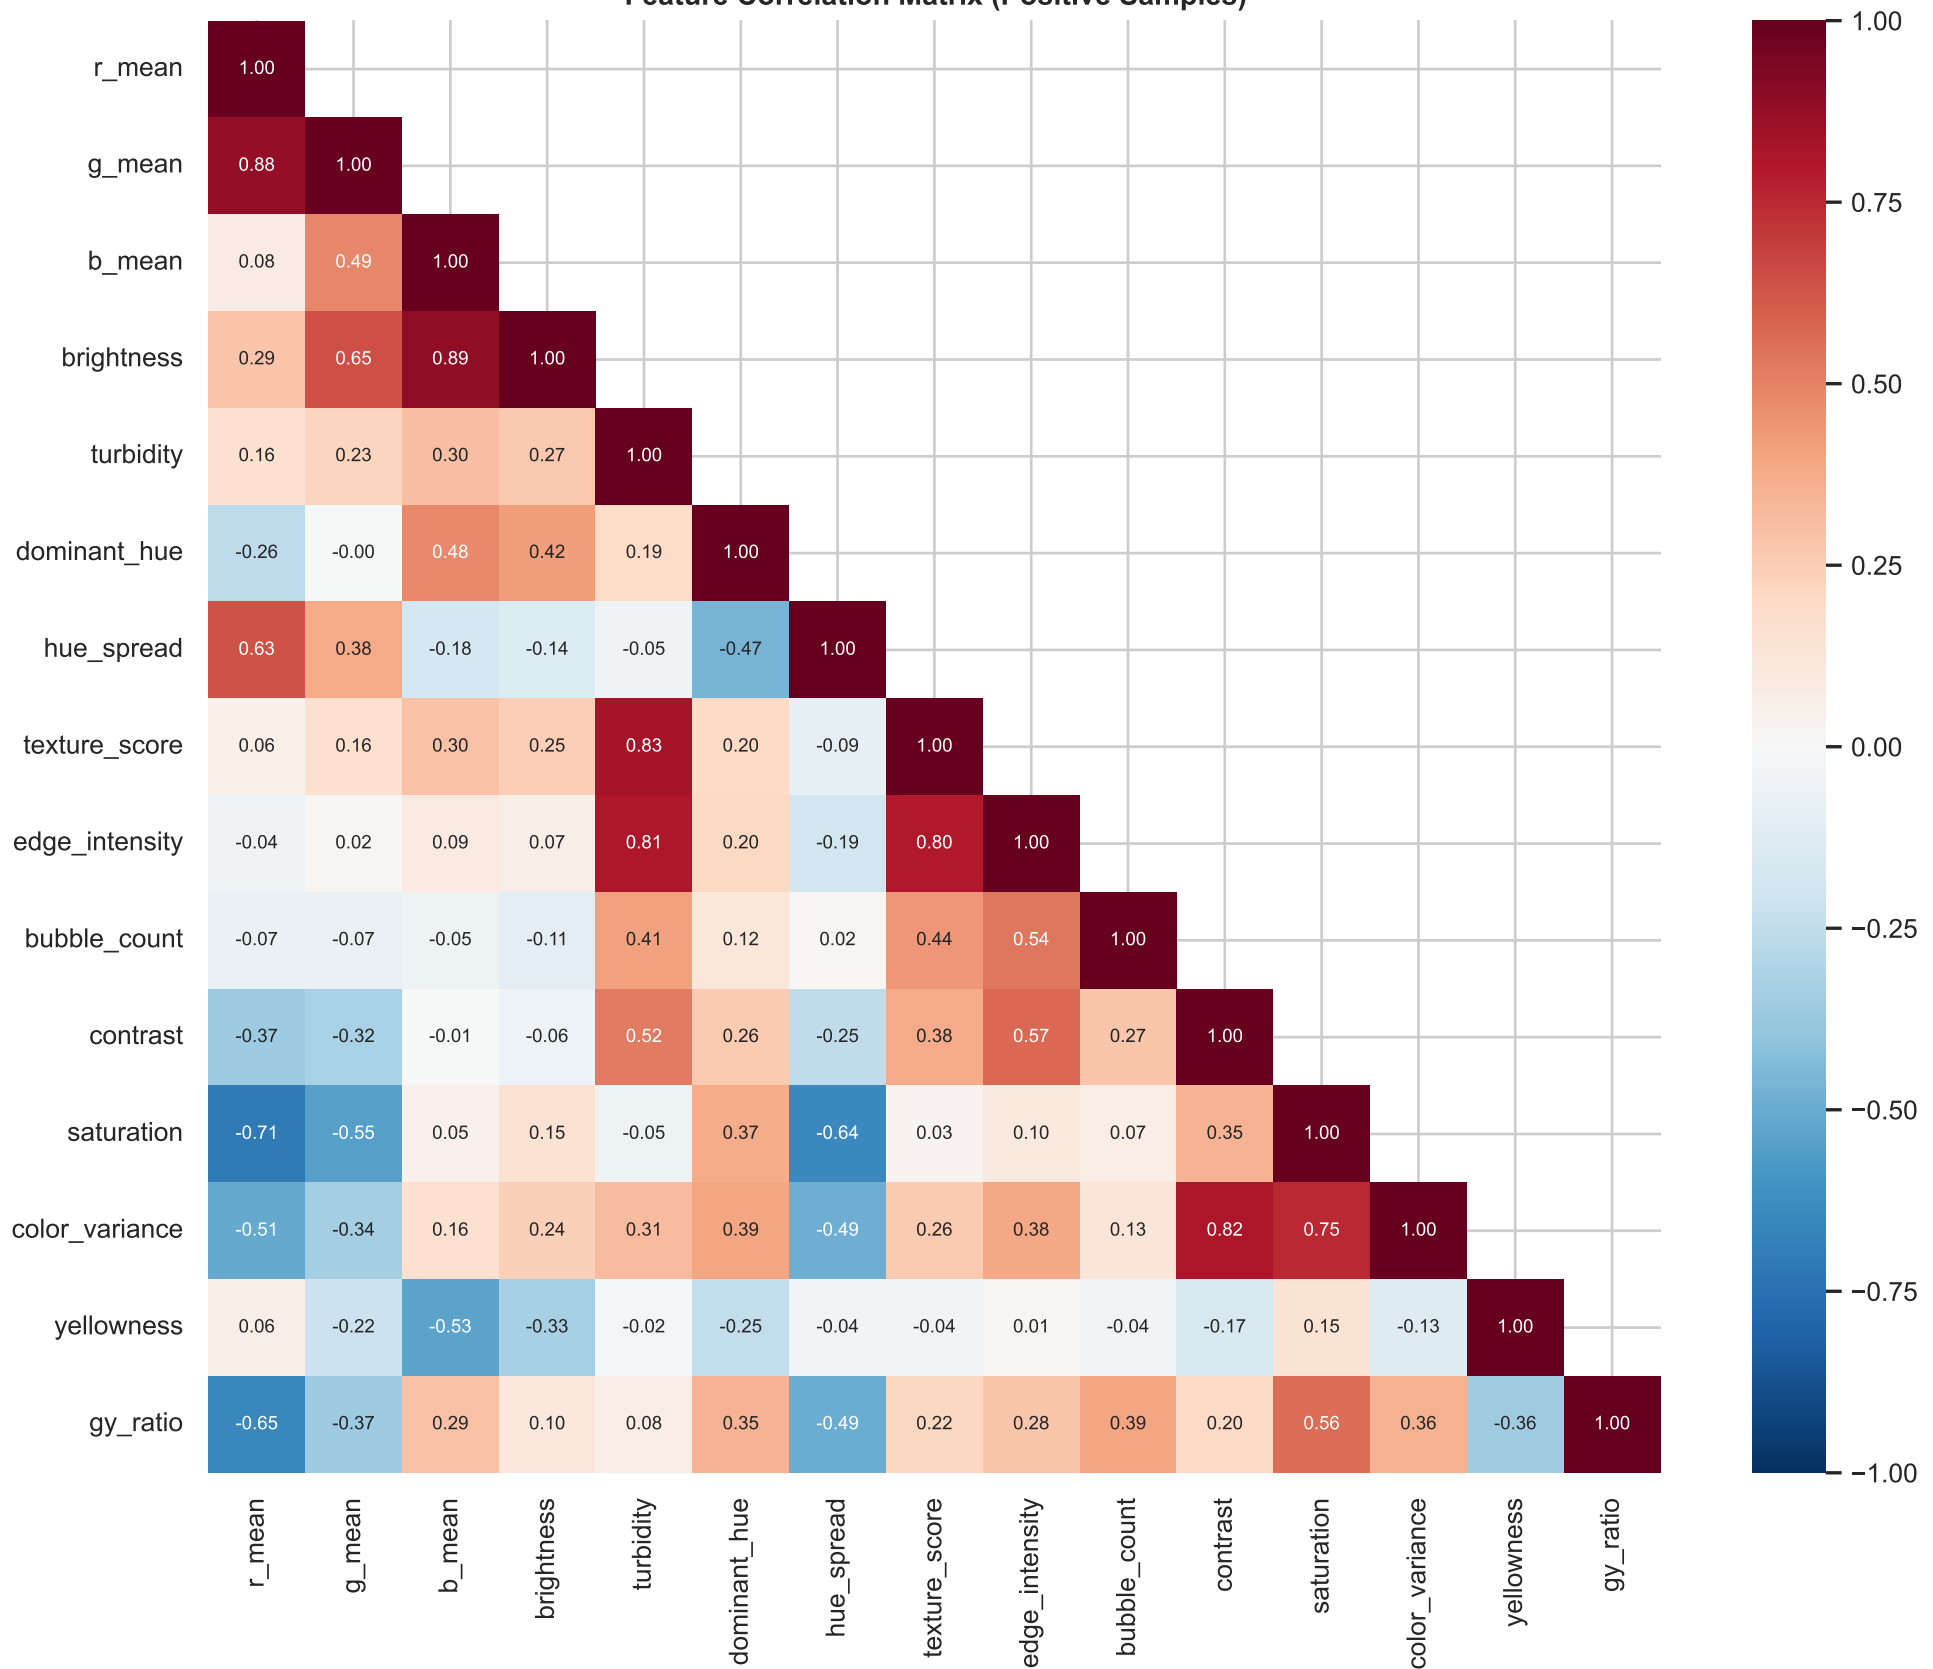

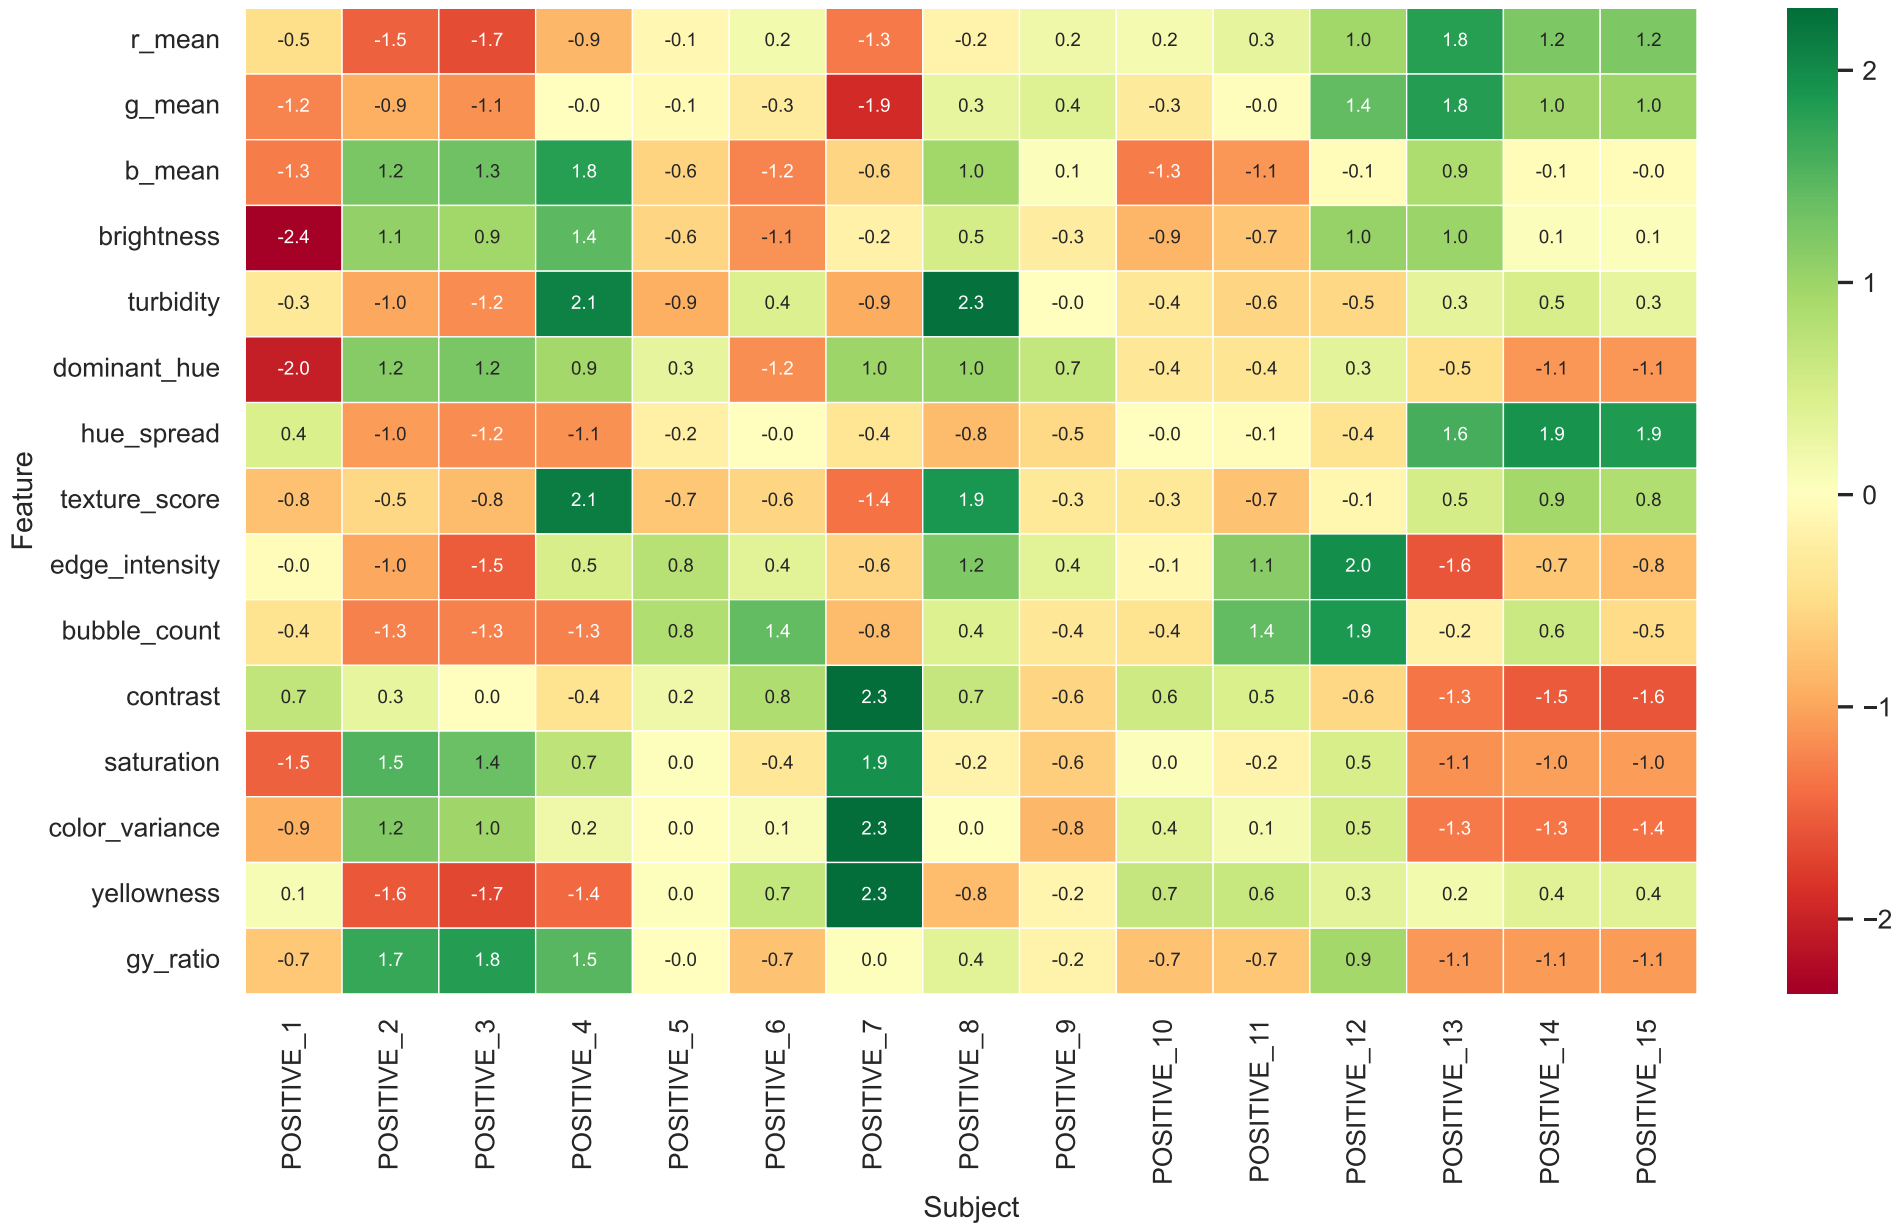

Feature Histograms (All Positive Samples Pooled)

Feature Correlation Matrix (Positive Samples)

Subject Feature Profiles (Z-scored)
Each column = one woman's average features

Within-Subject Coefficient of Variation (CV)
Lower = more consistent across frames
